Maryland Hospital Pricing Guide

Prepared by

Maryland Health Services Cost Review Commission

May 2008

Introduction

In today's complex and ever-changing health care market, consumers are becoming more responsible for their own health care, including its costs. This guide provides you with information you can use to understand Maryland's hospital market and to make more informed health care purchasing decisions.

All Payer Rate Setting System

The Health Services Cost Review Commission (HSCRC) was established by the General Assembly in 1971. The seven-member Commission is charged with reviewing and approving rates that hospitals can charge for their services and making financial information about Maryland hospitals available to the public. The HSCRC sets rates for all payers – private insurance companies, HMOs, Medicare and Medicaid. This system is referred to as the “all-payer” system where all payers pay for their fair share of hospital costs.

In establishing the HSCRC, the Maryland General Assembly set out to accomplish the following objectives:

- keep hospital services affordable;
- expand access to hospital care for those without insurance; and
- provide accountability for hospital performance to the public and state government.

Purpose

This guide has been prepared to provide information to consumers of hospital services about the differences in charges among Maryland hospitals for similar types of inpatient admissions. The charges in this report are annual averages and are provided for illustrative purposes only. Your bill may differ from the charges shown in these tables. Your actual bill reflects your use of services during your stay and the hospital's charges at the time of your admission.

Methodology

As part of its rate-setting activities, the HSCRC collects data from hospitals, which are used to monitor hospital utilization and charges, as well as to set inpatient rates. These data are used to generate the statistics reported in this section.

Each hospital admission is grouped into one of 320 “All Patient Refined Diagnosis Related Groups” (APR-DRGs) that classify patients into clinically cohesive categories based on the patient's medical condition and the severity of their illness. There are 320 APR-DRGs that are divided into four “severity of illness” levels. *Table 1* provides information on the 15 most common inpatient APR-DRGs as reported by Maryland hospitals for admissions from July 2006 through June 2007. For each acute care hospital in Maryland, the Table lists the number of cases in the APR-DRG, the average charge per case, and the average charge per day. The 15 most common APR-DRGs for all Maryland hospitals combined may or may not be commonly encountered at any particular hospital.

The number of “Cases” is the number of patient discharges between July 1, 2006 and June 30, 2007 within that APR-DRG. The number of cases was used to determine the 15 most common APR-DRGs. Data for hospitals with fewer than six cases within an APR-DRG are not reported. The “Average Charge per Case” is the average charge for cases in the APR-DRG at each hospital after the charge has been weighted by the statewide severity distribution for the APR-DRG (this creates a severity-adjusted average charge). The average charge does not include physician fees. The “Average Charge per Day” is the severity adjusted average charge divided by the average length of stay for patients in an APR-DRG at each hospital.

Each hospital's average charge can be affected by a number of factors, including:

- Patients' severity of illness.
- Wage levels and the price of goods and services in its area.
- The amount of teaching it does.
- The amount of uncompensated care it provides.

These factors are reflected in the amount that Maryland hospitals are allowed to charge for services. In addition, the average charge for each APR-DRG is weighted by the statewide severity distribution for that category. For example, in APR-DRG 127, cases statewide are distributed as follows:

Level 1 – 15%
Level 2 – 30%
Level 3 – 30%

Level 4 – 25%

At “Hospital A,” average charge for each severity level is illustrated weighted by the statewide distribution as follows:

Level 1 - \$6,000 * 15% = \$ 900

Level 2 - \$6,500 * 30% = \$1,950

Level 3 - \$7,200 * 30% = \$2,160

Level 4 - \$8,000 * 25% = \$2,000

Total: \$7,010 = weighted average charge for APR-DRG 127

Note: The charges provided are to be used as a guide only. Your bill may differ from the charges shown in these tables. **These charges reflect annual averages.** Your bill reflects your use of services during your stay and the hospital’s rates at the time of your admission.

How to Use the Tables in this Guide

Table 1 begins on page five. It shows charges for the fifteen most common inpatient diagnoses. The APR-DRGs are presented in order starting with the most frequent categories.

APR-DRG 640 - Newborn
APR-DRG 560 - Vaginal Delivery
APR-DRG 540 - Cesarean Delivery
APR-DRG 194 - Heart Failure
APR-DRG 720 – Septicemia & Disseminated Infections
APR-DRG 139 – Other Pneumonia
APR-DRG 203 – Chest Pain
APR-DRG 140 - Chronic Obstructive Pulmonary Disease (COPD)
APR-DRG 198 – Angina Pectoris & Coronary Atherosclerosis
APR-DRG 383 - Cellulitis & Other Skin Infections
APR-DRG 302 – Knee Joint Replacement
APR-DRG 175 – Percutaneous Cardiovascular Procedures Without Acute Myocardial Infarction
APR-DRG 201 - Cardiac Arrhythmia & Conduction Disorders
APR-DRG 753 – Bipolar Disorders
APR-DRG 751 – Major Depressive Disorders

TABLE 1
INPATIENT DATA FOR JULY 1, 2006 - JUNE 30, 2007
Top Fifteen All Patient Refined Diagnosis Related Groups (APR-DRG)

APR-DRG 640 - Neonate birth wt > 2499g, normal newborn or w/ other

problem: This APR-DRG refers to charges for a newborn baby that weighs at least 5 ½ pounds

†

† Note:

1. An asterisk indicates a cell count less than seven.
2. A weighted charge is the average charge per APR DRG with weights being the severity level percent of that APR DRG for the entire state. If there are missing severity levels at a hospital, the formula is modified Step One: Calculate the fraction (f_{as}) of cases in each APR DRG (a) for each severity (s) statewide. Step Two: Compute the weighted average charge for each APR DRG for each hospital using (f_{as}) as the weight.

APR-DRG 560 - Vaginal Delivery: This refers to the charges for the mother who had a normal delivery
